

Estimation of Coupled Exponential Distribution

Plot of equations of GeoMean, mean of pairs, second moment of triplets.

From notes by Amaneh Al-Najafi

Correction: the equation for G (geometric mean), the sign of κ needs to be reversed. This changes the equation to reference from the paper by Vogel to:

$$G = \frac{\sigma\mu}{\kappa} \text{Exp}\left[\text{PolyGamma}[1] - \text{PolyGamma}\left[1 + \frac{1}{\kappa}\right] + \kappa\right]$$

$$\begin{bmatrix} G = \frac{\sigma\mu}{\kappa} \exp\left(\psi(1) - \psi\left(1 + \frac{1}{\kappa}\right)\right) \\ \mu_1 = \mu + \frac{\sigma}{2} \\ \mu_1^{(2)} = \mu^2 + \frac{2\mu\sigma}{3 + \kappa} + \frac{2\sigma^2}{3(3 + \kappa)} \end{bmatrix}.$$

$$\mu = \mu_1 - \frac{\sigma}{2}$$

$$\kappa = \left[2\sigma\left(\mu_1 - \frac{\sigma}{2}\right) + \frac{2\sigma^2}{3} - 3\left(\mu_2 - \left(\mu_1 - \frac{\sigma}{2}\right)^2\right) \right] \left(\mu_2 - \left(\mu_1 - \frac{\sigma}{2}\right)^2 \right)^{-1}$$

$$\sigma = \mu_1 - \sqrt{\mu_1^2 - 2G \frac{\left[2\sigma\left(\mu_1 - \frac{\sigma}{2}\right) + \frac{2\sigma^2}{3} - 3\left(\mu_2 - \left(\mu_1 - \frac{\sigma}{2}\right)^2\right) \right]}{\left(\mu_2 - \left(\mu_1 - \frac{\sigma}{2}\right)^2\right)^{-1}} \left[\exp\left(\psi\left(1 + \frac{\mu_2 - \left(\mu_1 - \frac{\sigma}{2}\right)^2}{2\sigma\left(\mu_1 - \frac{\sigma}{2}\right) + \frac{2\sigma^2}{3} - 3\left(\mu_2 - \left(\mu_1 - \frac{\sigma}{2}\right)^2\right)}\right) + \gamma \right) \right]}$$

Where $\gamma = 0.5772$

My estimates of the GM, the 1st moment of the pairs, and the 2nd moment of the triplets for several examples of the GPD:

\kappa	GM	1st moment	2nd moment
0.5	2.716987	2.2497471	0.424
1	3.17177	2.249486	4.105583
2	4.9799	2.25	5589.1

The results below are based on Amenah's derivation; however, the Mathematica derivation showed a difference, so this section will eventually be modified.

`In[]:= $Assumptions = {\mu, \sigma, \kappa} \in \text{Reals} \&\& 0 < \sigma < \infty \&\& 0 < \kappa < \infty \&\& 0 \leq p \leq 1`

Find Minimum of SecondMomentTriples with respect to κ

$$\text{In}[*]:= \text{Solve}\left[\frac{17}{2} = \left(\frac{7}{2} - \frac{\sigma}{2}\right)^2 + \frac{2\left(\frac{7}{2} - \frac{\sigma}{2}\right)\sigma}{3 + \kappa} + \frac{2\sigma^2}{3(3 + \kappa)}, \kappa\right]$$

$$\text{Out}[*]:= \left\{\left\{\kappa \rightarrow \frac{-135 + 42\sigma - 5\sigma^2}{3(15 - 14\sigma + \sigma^2)}\right\}\right\}$$

$$\text{In}[*]:= \text{FindMinimum}\left[\frac{-135 + 42\sigma - 5\sigma^2}{3(15 - 14\sigma + \sigma^2)}, \{\sigma, 1\}\right]$$

 **FindMinimum** : Line search unable to find a sufficient decrease in the function value with MachinePrecision digit precision.

$$\text{Out}[*]:= \{-4.3368 \times 10^{14}, \{\sigma \rightarrow 1.16905\}\}$$

$$\text{In}[*]:= \text{Plot}\left[\frac{-135 + 42\sigma - 5\sigma^2}{3(15 - 14\sigma + \sigma^2)}, \{\sigma, 0, 10\}, \text{PlotRange} \rightarrow \text{Automatic}\right]$$

$$\text{In}[*]:= \text{Plot}\left[\frac{-135 + 42\sigma - 5\sigma^2}{3(15 - 14\sigma + \sigma^2)}, \{\sigma, 0, 10\}, \text{PlotRange} \rightarrow \text{Full}\right]$$

```
In[8]:= FindMinimum[ $\frac{-135 + 42 \sigma - 5 \sigma^2}{3 (15 - 14 \sigma + \sigma^2)}$ , { $\sigma$ , 2}]
```

```
Out[8]:= {0.554805, { $\sigma \rightarrow 4.89929$ }}
```

So there are some challenges with the search for σ and κ if the search does not seed a value close to the solution. In particular the zero of $(15 - 14 \sigma + \sigma^2)$ causes κ to go to infinity. It's important to be the side that produces a positive kappa

Examine Approximations for the HyperGeometric Function

The attempts to use NSolve, even on approximations of the HyperGeometric function ran for over 24 hrs without a solution

From StackExchange

<https://math.stackexchange.com/questions/718442/approximating-hypergeometric-function->

f1-1a-2a-z-for-z-1

$${}_2F_1(1, 1 + a, 2 + a, z) = -\frac{1 + a}{z^{1+a}} \left(\log(1 - z) + H_a + \sum_{n=1}^{\infty} \binom{a}{n} \frac{(z - 1)^n}{n} \right).$$

Focusing on the domain $\mu > 0$ and $\kappa > 0$, $\text{GeoMean} = e^{\kappa \text{Hypergeometric2F1}\left[1, \frac{1}{\kappa}, 1 + \frac{1}{\kappa}, 1 - \frac{\kappa \mu}{\sigma}\right]} \mu$

From the equation above, $a = \frac{1}{\kappa} - 1$, $z = 1 - \frac{\kappa \mu}{\sigma}$

In[17]:= **GeoMeanApprox** [μ _, σ _, κ _] := **GeoMeanApprox** [μ , σ , κ] =

$$\mu \text{Exp} \left[\frac{-1/\kappa}{\left(1 - \frac{\kappa \mu}{\sigma}\right)^{1/\kappa}} \left(\text{Log} \left[\frac{\kappa \mu}{\sigma} \right] + \text{HarmonicNumber} \left[\frac{1}{\kappa} - 1 \right] + \sum_{n=1}^{\infty} \frac{\text{Binomial} \left[\frac{1}{\kappa} - 1, n \right] \left(-\frac{\kappa \mu}{\sigma}\right)^n}{n} \right) \right];$$

Can the GeoMean Equation be split into components to simplify solution?

$$\text{GeoMeanEst} = e^{\kappa \text{Hypergeometric2F1}\left[1, \frac{1}{\kappa}, 1 + \frac{1}{\kappa}, 1 - \frac{\kappa \mu}{\sigma}\right]} \mu$$

$$\frac{1}{\kappa} \text{Log}\left[\frac{\text{GeoMeanEst}}{\mu}\right] = \text{Hypergeometric2F1}\left[1, \frac{1}{\kappa}, 1 + \frac{1}{\kappa}, 1 - \frac{\kappa \mu}{\sigma}\right]$$

Plot the two expressions to explore approaches to solving equation

```

In[47]:= PlotGeoMeanComponents[GeoMeanEst_,
  MeanPairEst_, SecondMomentTripletsEst_, CEParams_] :=
Plot[{
   $\frac{1}{\kappa} \text{Log}\left[\frac{\text{GeoMeanEst}}{\mu}\right]$  /. MPSMTSolution[MeanPairEst, SecondMomentTripletsEst],

... **General** : Further output of Solve::ratnz will be suppressed during this calculation.

Modify the GeoMean equation to be a function of μ instead of κ . Perhaps GeoMean is more sensitive to μ and therefore shows less of the dependency evident in the above plots.
