Estimation of Coupled Exponential Distribution

Plot of equations of GeoMean, mean of pairs, second moment of triplets.

From notes by Amaneh Al-Najafi

Correction: the equation for G (geometric mean), the sign of κ needs to be reversed. This changes the equation to reference from the paper by Vogel to:
$G = \frac{\sigma\,\mu}{\kappa}$ Exp[PolyGamma[1] – PolyGamma[$1 + \frac{1}{\kappa}$] + κ]

$$\begin{bmatrix} G = \dfrac{\sigma\mu}{\kappa}\exp(\psi(1) - \psi(1 + \dfrac{1}{\kappa})) \\ \mu_1 = \mu + \dfrac{\sigma}{2} \\ \mu_1^{(2)} = \mu^2 + \dfrac{2\mu\sigma}{3+\kappa} + \dfrac{2\sigma^2}{3(3+\kappa)} \end{bmatrix}.$$

$$\mu = \mu_1 - \frac{\sigma}{2}$$

$$\kappa = \left[2\sigma(\mu_1 - \frac{\sigma}{2}) + \frac{2\sigma^2}{3} - 3\Big(\mu_2 - (\mu_1 - \frac{\sigma}{2})^2\Big)\right]\Big(\mu_2 - (\mu_1 - \frac{\sigma}{2})^2\Big)^{-1}$$

$$\sigma = \mu_1 - \sqrt{\mu_1^2 - 2G\frac{\left[2\sigma(\mu_1 - \frac{\sigma}{2}) + \frac{2\sigma^2}{3} - 3\Big(\mu_2 - (\mu_1 - \frac{\sigma}{2})^2\Big)\right]}{(\mu_2 - (\mu_1 - \frac{\sigma}{2})^2)^{-1}}\left[\exp\left(\psi\Big(1 + \frac{\mu_2 - (\mu_1 - \frac{\sigma}{2})^2}{2\sigma(\mu_1 - \frac{\sigma}{2}) + \frac{2\sigma^2}{3} - 3\Big(\mu_2 - (\mu_1 - \frac{\sigma}{2})^2\Big)}\Big) + \gamma\right)\right]}$$

Where $\gamma = 0.5772$

My estimates of the GM, the 1st moment of the pairs, and the 2nd moment of the triplets for several examples of the GPD:

\kappa	GM	1st moment	2nd moment
0.5	2.716987	2.2497471	0.424
1	3.17177	2.249486	4.105583
2	4.9799	2.25	5589.1

The results below are based on Amenah's derivation; however, the Mathematica derivation showed a difference, so this section will eventually be modified.

Find Minimum of SecondMomentTriples with respect to κ

In[∘]:= Solve$\left[\frac{17}{2} == \left(\frac{7}{2} - \frac{\sigma}{2}\right)^2 + \frac{2\left(\frac{7}{2} - \frac{\sigma}{2}\right)\sigma}{3 + \kappa} + \frac{2\,\sigma^2}{3\,(3 + \kappa)}, \kappa\right]$

Out[∘]= $\left\{\left\{\kappa \to \frac{-135 + 42\,\sigma - 5\,\sigma^2}{3\left(15 - 14\,\sigma + \sigma^2\right)}\right\}\right\}$

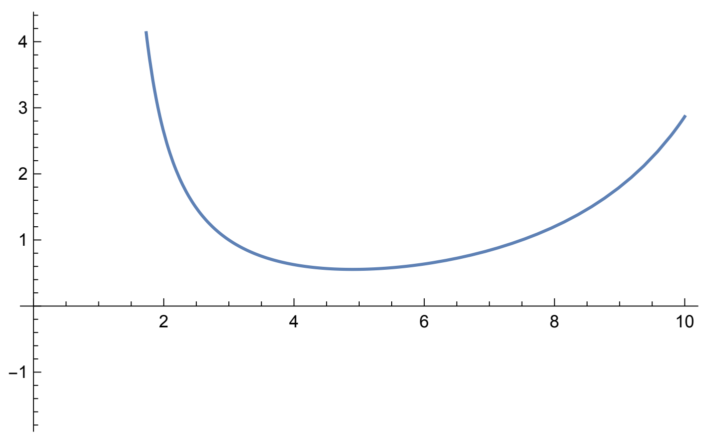
In[∘]:= FindMinimum$\left[\frac{-135 + 42\,\sigma - 5\,\sigma^2}{3\left(15 - 14\,\sigma + \sigma^2\right)}, \{\sigma, 1\}\right]$

FindMinimum : Line search unable to find a sufficient decrease in the function value with MachinePrecision digit precision.

Out[∘]= $\{-4.3368 \times 10^{14}, \{\sigma \to 1.16905\}\}$

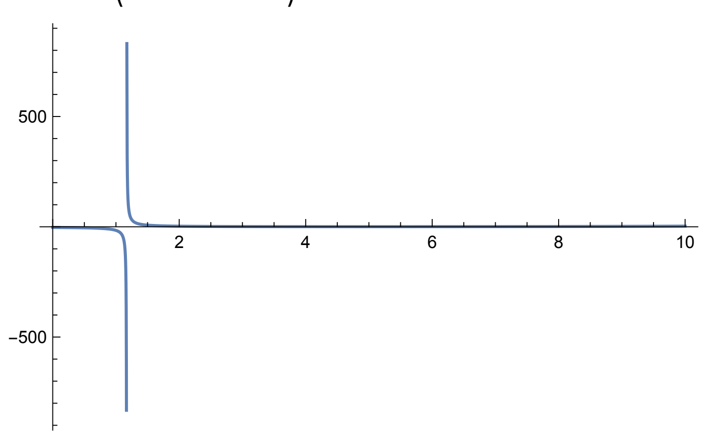
In[∘]:= Plot$\left[\frac{-135 + 42\,\sigma - 5\,\sigma^2}{3\left(15 - 14\,\sigma + \sigma^2\right)}, \{\sigma, 0, 10\}, \text{PlotRange} \to \text{Automatic}\right]$

Out[∘]=



In[∘]:= Plot$\left[\frac{-135 + 42\,\sigma - 5\,\sigma^2}{3\left(15 - 14\,\sigma + \sigma^2\right)}, \{\sigma, 0, 10\}, \text{PlotRange} \to \text{Full}\right]$

Out[∘]=



In[ ]:=
$$\text{FindMinimum}\left[\frac{-135+42\,\sigma-5\,\sigma^2}{3\,\left(15-14\,\sigma+\sigma^2\right)},\ \{\sigma,\ 2\}\right]$$

Out[ ]=
$$\{0.554805,\ \{\sigma \to 4.89929\}\}$$

So there are some challenges with the search for σ and κ if the search does not seed a value close to the solution. In particular the zero of $\left(15-14\,\sigma+\sigma^2\right)$ causes κ to go to infinity. It's important to be the side that produces a positive kappa

Examine Approximations for the HyperGeometric Function

The attempts to use NSolve, even on approximations of the HyperGeometric function ran for over 24 hrs without a solution

From StackExchange
https://math.stackexchange.com/questions/718442/approximating-hypergeometric-function-

f1-1a-2a-z-for-z-1

$$ {}_2F_1(1, 1+a, 2+a, z) = -\frac{1+a}{z^{1+a}}\left(\log(1-z) + H_a + \sum_{n=1}^{\infty}\binom{a}{n}\frac{(z-1)^n}{n}\right). $$

Focusing on the domain $\mu > 0$ and $\kappa > 0$, GeoMean = $e^{\kappa\,\text{Hypergeometric2F1}\left[1,\frac{1}{\kappa},1+\frac{1}{\kappa},1-\frac{\kappa\mu}{\sigma}\right]}\mu$
From the equation above, a = $\frac{1}{\kappa} - 1$, z = $1 - \frac{\kappa\mu}{\sigma}$

In[ ]:=
```
GeoMeanApprox[μ_, σ_, κ_] := GeoMeanApprox[μ, σ, κ] =
```
$$\mu\,\text{Exp}\left[\frac{-1}{\left(1-\frac{\kappa\mu}{\sigma}\right)^{1/\kappa}}\left(\text{Log}\left[\frac{\kappa\mu}{\sigma}\right] + \text{HarmonicNumber}\left[\frac{1}{\kappa}-1\right] + \sum_{n=1}^{0}\frac{\text{Binomial}\left[\frac{1}{\kappa}-1, n\right]\left(-\frac{\kappa\mu}{\sigma}\right)^n}{n}\right)\right];$$

Modify the GeoMean equation to be a function of μ instead of κ. Perhaps GeoMean is more sensitive to μ and therefore shows less of the dependency evident in the above plots.

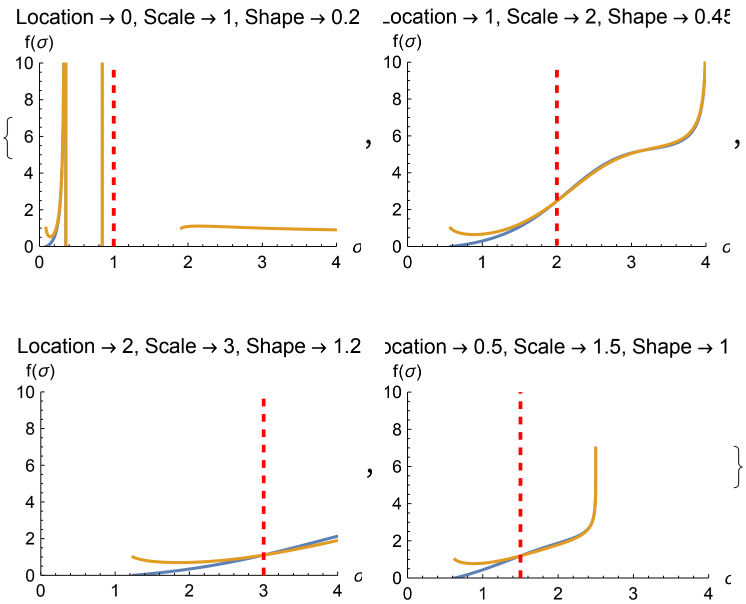
Out[ ]=



Is it possible to remove the dependency between the two functions using the expansion of the Hypergeometric function?

$$ {}_2F_1(1, 1+a, 2+a, z) = -\frac{1+a}{z^{1+a}}\left(\log(1-z) + H_a + \sum_{n=1}^{\infty}\binom{a}{n}\frac{(z-1)^n}{n}\right). $$

$$ \text{Hypergeometric2F1}\left[1, \frac{1}{\kappa}, 1+\frac{1}{\kappa}, 1-\frac{\kappa\mu}{\sigma}\right] = $$

$$ \frac{-1/\kappa}{\left(1-\frac{\kappa\mu}{\sigma}\right)^{1/\kappa}}\left(\text{Log}\left[\frac{\kappa\mu}{\sigma}\right] + \text{HarmonicNumber}\left[\frac{1}{\kappa}-1\right] + \sum_{n=1}^{N}\frac{\text{Binomial}\left[\frac{1}{\kappa}-1, n\right]\left(-\frac{\kappa\mu}{\sigma}\right)^n}{n}\right) $$

must equal $\frac{1}{\kappa}\,\text{Log}\left[\frac{\text{GeoMeanEst}}{\mu}\right] = \frac{1}{\kappa}\,\text{Log[GeoMeanEst]} - \frac{1}{\kappa}\,\text{Log}[\mu]$,

so the $1/\kappa$ can be factored out and term $-\frac{1}{\kappa}\,\text{Log}[\mu]$ can be eliminated ; this log term has some other

multiplying factors
factoring out 1/κ first gives
Log[GeoMeanEst] - Log[μ] =

$$\frac{-1}{\left(1-\frac{\kappa\mu}{\sigma}\right)^{1/\kappa}}\left(\text{Log}\left[\frac{\kappa\mu}{\sigma}\right]+\text{HarmonicNumber}\left[\frac{1}{\kappa}-1\right]+\sum_{n=1}^{N}\frac{\text{Binomial}\left[\frac{1}{\kappa}-1,n\right]\left(-\frac{\kappa\mu}{\sigma}\right)^{n}}{n}\right)$$

Log[GeoMeanEst] =

$$\text{Log}[\mu]-\frac{\text{Log}[u]}{\left(1-\frac{\kappa\mu}{\sigma}\right)^{1/\kappa}}+$$

$$\frac{-1}{\left(1-\frac{\kappa\mu}{\sigma}\right)^{1/\kappa}}\left(\text{Log}\left[\frac{\kappa}{\sigma}\right]+\text{HarmonicNumber}\left[\frac{1}{\kappa}-1\right]+\sum_{n=1}^{N}\frac{\text{Binomial}\left[\frac{1}{\kappa}-1,n\right]\left(-\frac{\kappa\mu}{\sigma}\right)^{n}}{n}\right)$$

The expression does not simplify very much but it does suggest comparing the Log[GeoMean] with the expression κ HG[...] + Log[μ]

In[7]:=
```
PlotGeoMeanComponents[GeoMeanEst_,
  MeanPairEst_, SecondMomentTripletsEst_, CEParams_] :=
